Clearview IM

A rapid one-step solution
for the diagnosis of Infectious Mononucleosis

Symptomatically IM (kissing disease), can resemble more serious infections which demand urgent treatment.

Rapid identification or elimination of IM is vital and can be achieved with Clearview IM in order to:

- Shorten the course of the illness
- Reduce severity of symptoms
- Reduce likelihood of complications
- Reduce spread to others

Features

- Use with either serum, plasma or whole blood samples
- Serum/Plasma results in 5 minutes
Whole Blood results in 15 minutes
- Highly sensitive and specific
- Built-in procedural test control
- Simple to use and easy to interpret
- Room temperature storage

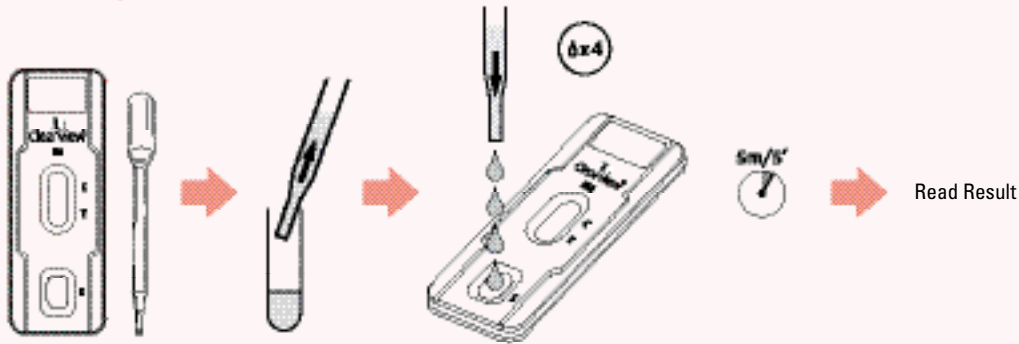

Benefits

- Flexible, convenient sample collection
- Rapid. Patients can be tested and receive results in one visit
- Accurate and reliable results
- Confirmation that the test has been performed correctly
- Minimal training required
- Ready to use - leaves valuable refrigerator space free

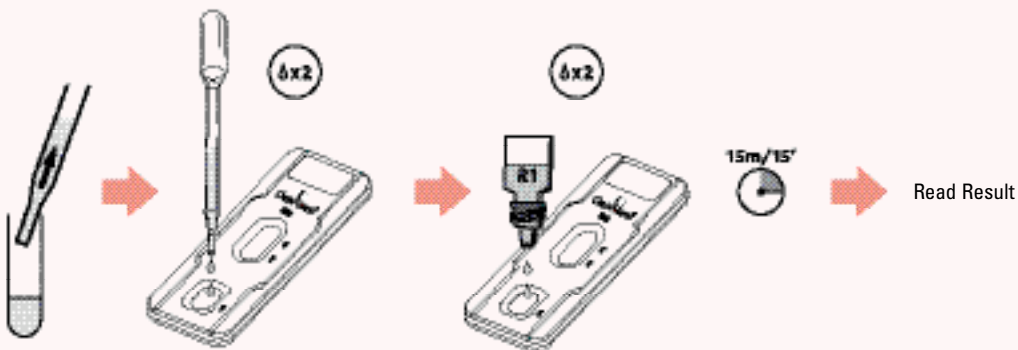

Clearview IM

IM detection made simple

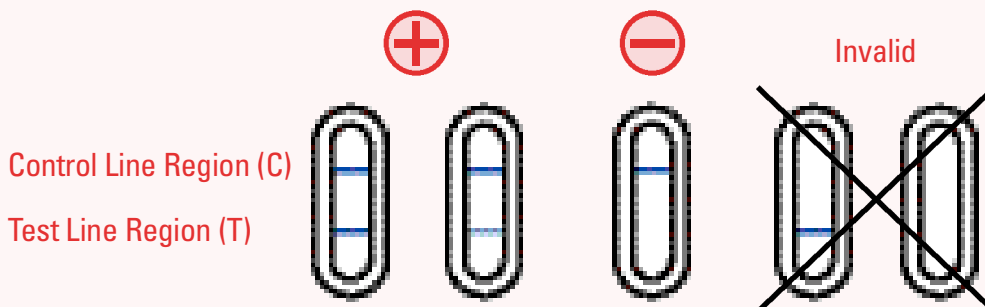

Serum/Plasma

Whole blood

Read result at 5 minutes (serum/plasma) or 15 minutes (whole blood). A blue line must appear in Control Line Region (C) to indicate test has worked correctly. Any result that appears after 5 minutes (serum/plasma) or 15 minutes (whole blood) should be ignored.

See package insert for complete instructions.
